GPS:

Errand Mapper Feature:

As a driver, I want to find the quickest route between a set of destinations

As a driver, I want to store that set of destinations so that I can retrieve it later

As a driver, I want to have the quickest route include determination of when the destinations are open

Business Value (for all stories): Driver will save time and expense in doing errands, thus selling more GPS units (hardware or software)

ATM:

As a customer, I want to get my money out as quickly as possible without having to use a PIN

As a customer, I want to ensure that only I can get my money out even if my PIN is divulged

Business Value: Customers will use ATM's more, so saving cost of having a teller.

Business Value: Fraudulent withdrawals will be reduced yielding less customer dissatisfaction and less time spent tracking down fraud
